

**Information Following Cerec Restorations**

CONGRATULATIONS!! Your new CEREC restoration(s) are the most state-of-the-art and longest lasting restorations in dentistry today. They will provide many years of service with proper care.

What to expect:

Your bite should feel even; and it should not hurt to chew. We do our best to make sure your bite is even until the anesthesia completely subsides. If you feel the new restoration is high, return to the office right away. This will not heal on its own and the tooth will become increasingly sensitive. A quick adjustment should correct this easily.

Soreness around the gum tissue and the site of anesthetic placement is common and will subside within a few days. To minimize discomfort, you may take regular pain medication as directed.

Cold sensitivity may persist for several days or even weeks. This should subside as the tooth "heals" internally. Please call the office if you have extreme hot or cold sensitivity.

Thorough brushing and flossing along with a diet low in sugar are essential for excellent dental health. Regular hygiene visits and examinations will help you keep your teeth in the optimum state of health.

State-of-the-art CAD/CAM software allowed us to design the most hi-tech restoration available in dentistry. You have just made a long-term investment in your dental health!!!

If you have any questions or concerns please feel free to contact the office (407) 699-9831

Thank you,

***Collins Dental Team***
